Your channel skills

Six skills built on 31 October 2026, saved in the **Projects-on-Claude** GitHub repo. Start every session from that repo, then type the skill name or just say what you want in plain words.

	SKILL	WHAT IT DOES	YOU GET
1	**/video-script** "New video: <topic>. My research: ..."	Researches the topic, offers 3 angles with hooks, then writes the full script in your fixed structure with every visual cue marked.	RESEARCH.md (stats with sources) and SCRIPT.md (script, cues, Reel tags, list of what to supply)
2	**/video-plan** "Make the shot plan"	Turns the approved script into a shot-by-shot plan. Also handles changes to your style.	SPEC.md (shot plan) and a filming list
3	**/video-edit** "Here's my recording, edit it"	Edits your recording in your style: captions, highlighter, newspaper spotlight, whips, red pen, B-roll and sound.	The YouTube video (16:9), then Reels (9:16) cut from it
4	**/format-check** "Format check this"	Checks YouTube and Instagram rules: size, safe zones, cut pace, smooth transitions and loudness.	Pass/fail report with timestamps and fixes
5	**/final-check** "Is it ready to post?"	Scores the video out of 100: facts, spelling, hook and CTA, glitches, copyright, company claims, platform policy.	READY TO POST or NOT YET (NOT YET blocks posting)
6	**/video-post** "Prepare it for posting"	Writes titles, thumbnail, description, Reels captions, hashtags, pinned comment, CTAs and a posting schedule.	A folder of copy-paste posting files and an upload checklist

> Four HyperFrames skills also came with the video tool (**/hyperframes**, **/hyperframes-cli**, **/hyperframes-registry**, **/media-use**). Your skills use them in the background, so you never need to trigger them yourself.

Shortcuts

- **Plain words work.** "New video: ...", "edit this", "is it ready to post?" or "write the captions" trigger the right skill.
- **Pick up later:** "Continue my <topic> video" resumes at the next unfinished step.
- **Run a check on its own:** "format check this" or "final check this".
- **Change your look:** "Make the highlighter more subtle" updates your style guide, and every later video follows it.

If the skills don't appear when you type "/", the session wasn't started from the Projects-on-Claude repo. Start a new session and select it.

WHEN TO TRIGGER EACH SKILL

From idea to posted

YOU: have a topic and some research

1 **/video-script**
"New video: <topic>. My research: ..."
Stops: pick 1 of 3 angles, then approve the script

2 **/video-plan**
"Make the shot plan"
Stops: approve the shot plan

YOU: record yourself and screenshot the news articles listed in the script

3 **/video-edit**
"Here's my recording, edit it"
Stops: watch the preview, give feedback until you approve

4 **/format-check**
Runs automatically after the edit
Stops: approve fixes. Problems go back to the edit.

ALL PASS

5 **/final-check**
Score out of 100
NOT YET: fix facts, text or glitches, then check again

READY TO POST

6 **/video-post**
"Prepare it for posting"
Stops: approve title, thumbnail and captions

YOU: upload to YouTube, then the Reels over the next few days

About a week later: "Here are my stats." /video-post reviews them and may suggest style changes, which /video-plan saves to your style guide.

Stops = Claude waits for your approval before going on.

Your video structure (written by /video-script)

0:00–0:05	Cold open: the result, with a news headline animation
0:05–0:12	A specific, intriguing question
0:12–0:25	Why it matters to you
0:25–~7:30	3–4 chapters: analogy, how it really works, a sourced stat, a viewer question answered, a fun-fact re-hook
~7:30–8:45	Impact on you
~8:45–10:00	Spot it yourself, then the debatable question with the A/B poll
